Chapter 1

Introduction

1.1 Background and objectives of the thesis

Blabla

For a quick and detailed introduction to \LaTeX et \LaTeX 2e, you can consult, in addition to classical books, [?, ?] and the website [?].

You may need to use other packages than those mentioned at the beginning of the file! To write algorithms, see for example the site [?].

1.2 Section name

Blabla

Blabla

1.3 Structure of the thesis

In chapter 3 ...

Blabla

1.4 Contributions

Our main contributions are ...

1.5 Notations

It may be interesting to gather here the main notations, their meaning, and the page where it is defined in more detail or possibly a bibliographic reference.

Chapter 2

Chapter name

It is important to always add all the needed bibliographic references [?, ?].

2.1 Section name

When an important notion is defined in a large document, it may be useful to add it in an index, this will allow the reader to quickly find this definition if he has forgotten it.

2.1.1 Sub-section name

This provides a more structured text.

Title of a paragraph You can also have subsubsections, but it is usually better to avoid it (in order to prevent to have sections numbering such as 3.2.1.5).

Similarly, we must choose how to number the definitions, lemmas, proposals and theorems. We may manage the corresponding counters to operate at the global level, at the level of sections, ... and we may prefer for example to avoid to have a theorem 1 which follows a proposal 15.

2.2 Second section

2.3 ...

Blabla [?].

Chapter 3

Second chapter

3.1 ...

Blabla [?].

3.2 ...

Chapter 4

4.2 ...

Conclusions

The conclusions are to be written with care, because it will be sometimes the part that could convince a potential reader to read the whole document.
